

# The Evolution of Textile Technology: Discover the Simta Group's Journey at GTTES 2025!

In the dynamic world of textile engineering, innovation and reliability are not just buzzwords, they are essential pillars that drive success. Since its inception in 1992, the Simta Group of Companies has been at the forefront of this evolution, providing cutting edge solutions that have transformed spinning mills around the globe. As we look back on their journey, it's clear that their commitment to excellence has made a lasting impact in the textile industry.

## *A Humble Beginning with Big Dreams*

Founded in 1992, Simta Group started its journey with a single product: the Simta Spindle Tape. This innovative solution quickly became a pioneer in the market, setting the stage for the company's expansion. With a focus on efficiency and performance, Simta's spindle tapes are now widely recognized as the go-to choice for spinning mills worldwide.

By 1998, the company had successfully ventured into international markets, establishing itself as the largest manufacturer and supplier of spindle tapes globally. This success not only solidified their reputation but also fuelled their ambition to innovate further.

## *Expanding the Product Line*

Building on their initial success, Simta launched the Clearer Roller in 2000, a patented product that enhanced the performance of spinning machines. As Original Equipment Manufacturers (OEM) for renowned brands like Reiter, Marzoli, and Zinser, Simta's Clearer Rollers gained acclaim for their quality and effectiveness. Their ability to cater to major players in the industry showcased their commitment to providing top-notch solutions.

The year 2002 marked another milestone with the introduction of the Over Head Travelling Cleaner (OHTC). This innovative product significantly improved cleaning efficiency in spinning and weaving applications. A crucial collaboration with C-PORT JACOBI GmbH of Germany further reinforced Simta's image as a

quality-conscious

manufacturer. Today, with over 200,000 OHTC units deployed worldwide, Simta has proven its technological superiority time and again.

## ***Innovative Partnerships and New Ventures***

The journey of innovation didn't stop there. In 2009, Simta launched the Bobbin Transport System in collaboration with Jacobi, further expanding its portfolio and solidifying its presence in the textile machinery sector. This commitment to quality and innovation not only enhanced their product offerings but also showcased their ability to adapt to changing market needs.

In addition to their core textile machinery products, Simta has ventured into other areas, including a weaving unit established in 2007. Equipped with 16 PICONOL RAPIER LOOMS and sectional warping machines, they now manufacture technical textile fabrics while offering job order services for various fabric types.

The company's diversification continued with the introduction of uPVC window profiles in 2012, producing around 1,000 metric tons per month. As the largest manufacturer of uPVC profiles in India, Simta has successfully branched out into new markets while maintaining its stronghold in textile engineering.

## ***A Global Footprint***

With 70% of their production dedicated to exports, Simta Group has established a significant global presence. Their products are not just well-regarded in India, they are trusted by clients across continents. This international reach speaks volumes about their commitment to quality and customer satisfaction.

Simta's journey is a testament to the power of innovation, reliability, and a steadfast commitment to quality. As they continue to evolve and expand their product offerings, they remain dedicated to serving the needs of their clients in the textile industry and beyond.

## ***Join the Textile Revolution***

As the textile industry continues to evolve, companies like Simta are leading the charge, driving advancements that redefine what is possible in textile engineering. Their story is an inspiring example for aspiring entrepreneurs and industry veterans

alike, reminding us that with innovation and dedication, anything is achievable. As Simta Group prepares for its next chapter, they invite you to explore their range of products and solutions at Stall No. B-11, Hall-3, GTTES 2025. Discover how their expertise can elevate your operations and help you navigate the ever-changing landscape of textile technology. Together, let's embrace the future of textiles and push the boundaries of innovation!
