The Textile Industry Will Modernize Machines to Save Energy

One of the modernization programs was carried out in collaboration with the non-profit textile organization, the India ITME Society.

T

Danang Girindrawardana, Executive Director of the Indonesian Textile Association (API), stated that one of the energy-saving measures **the textile** and textile products (TPT) industry needs to undertake is through innovative changes to production machinery. This effort is necessary amidst the surge in global energy prices resulting from the Iran-United States war.

API will soon meet with a delegation from the Indian ITME Society to discuss introductions with leading Indian companies in the textile machinery and technology sector. The scope of modernization technologies discussed will include *spinning, weaving, processing, dyestuffs and chemicals, digital printing, technical textiles, and sports technology*. Danang views this collaboration as an opportunity to explore the potential for increased cooperation between Indonesia and India in the textile and textile (TPT) sector.

API urged the government to support this initiative to retain millions of workers in Indonesia's labor-intensive textile and garment industries. According to Danang, labor-intensive industries need to be maintained to create as many jobs as possible, in line with efforts to reduce the rising unemployment rate each year.

On the one hand, the Association supports the government's move to maintain the price of subsidized fuel and biodiesel until the end of the year, as well as efforts to conserve fuel consumption by adapting to a work- *from-home* work culture one day a week. The Association also expressed its appreciation for the decision to increase airline ticket prices to accommodate the surge in global aviation fuel prices.
